Dear Valued Customer:

FDA indirect food additive regulations

Kortho Thermal Transfer Ribbons are in compliance with ISEGA. The FDA regulation states that if usage of printing inks is limited to the exterior of food packaging or otherwise such that there is a functional barrier between the inks and the food (no reasonable expectation of migration of components of the inks to food as a result of their intended use), they are not subject to FDA regulation as (indirect) food additives and so are not required to comply with FDA indirect food additive regulations (Title 21 of the Code of Federal Regulations Parts 174.5 – 189).

As a result, **Kortho** Thermal Transfer Ribbons are not required to comply with FDA indirect food additive regulations.

Sincerely yours,

Signature :

A handwritten signature in black ink that reads "Melvdert de Groot". The signature is written in a cursive, slightly slanted style.

Name : M. de Groot
