# kortho

## PRINTERFACE ioT

## ONE CONTROLLER FOR ALL YOUR PRINTERS

The Kortho Printerface IoT is the universal controller for all Kortho printers. Next to using it one on one, it's also possible to control multiple printers with one single controller. Even if they are totally different models like thermal and inkjets! Just operate all printers from the same user-friendly interface.

## SAVE MONEY AND SPACE AT THE PRODUCTION LINE

By just needing one controller for all printers a lot of money can be saved. Secondly, by not having to put up all these control boxes there's a lot more free space at the production line. The amount of printers that can be controlled with one Printerface IoT is unlimited. The more printers, the bigger the benefits.

## OMNICOMPATIBLE WITH ALL SOFTWARE AND ERP SYSTEMS

The Kortho Printerface IoT has a full Windows 10 OS. Because of this you have full Windows functionality in the GUI. This means that any Windows software will run directly on the controller. So if for example you wish to control your printers with Nicelabel or Bartender no additional PC will be needed anymore.
